

Joint Authorities for Rulemaking of Unmanned Systems

PRESS RELEASE No. 2014/02

July 7, 2014

External consultation for JARUS – C2 RCP

Guidance on RPAS C2 link
Required Communication Performance (C2 link RCP)

Please be informed that the proposed Guidance on RPAS C2 link Required Communication Performance (C2 link RCP) is now available on the JARUS website under "[Draft Deliverables](#)" for external consultation together with the comments' form which is not online though this procedure will change in the near future to make it easier. Therefore, please send your comments back to julia.sanchez@eurocontrol.int in order to gather all your views.

The purpose of this guidance material is to explain the concept of C2 link RCP, identify whether its requirements are applicable to the provision of C2 communications, support the use of command and control communications within a RPAS and provide a basis for the application of C2 link RCP in a the context of operational scenarios.

Since this document has already been presented at the public Workshop in May 2014, we are starting the external consultation immediately. The deadline for providing comments is **August 29, 2014**.

JARUS is soliciting feedback and comments from authorities and stakeholders in the non-military RPAS market from anywhere in the world.

JARUS is a group of experts coming from National Aviation Authorities (NAAs) from the five continents and the European Aviation Safety Agency (EASA).

More information about JARUS can be found on the website
