

Joint Authorities for Rulemaking on Unmanned Systems

PRESS RELEASE No. 2017/20

31 July 2017

JARUS Publication: SORA is now available online

JARUS is pleased to announce to the RPAS Community that the deliverable “**JAR doc 06 on Specific Operations Risk Assessment (SORA)**” is now available on the JARUS Website at <http://jarus-rpas.org/publications>.

This document recommends a risk assessment methodology to establish a sufficient level of confidence that a specific operation can be conducted safely. Next to the document there are two Annexes; *Annex A* - Guidelines on collecting and presenting system and operation information for a specific UAS operation and, *Annex I* - Glossary of Terms.

IMPORTANT: This is a living document, therefore this first issue of the SORA is meant to inspire operators and approving authorities and to highlight the benefits of a harmonized risk assessment methodology. As the work on the SORA evolves, feedback from operators and authorities that use the SORA is highly beneficial. Working Group 6 is therefore making a call to everyone that will use the methodology to provide this feedback. For this reason, a specific "feedback form" has been created at <http://jarus-rpas.org/feedback/SORA>

This is another significant accomplishment by JARUS, with the contributions of our member countries and the experts of Working Group 6 (Safety and Risk Management).

Feel free to forward this message to anyone interested about JARUS deliverables.

Note to editors

JARUS is a group of experts from 52 National Aviation Authorities (NAAs) and regional aviation safety organizations, as well as EASA and EUROCONTROL.

JARUS aims to recommend a single set of technical, safety and operational requirements for the certification and the safe integration of Unmanned Aircraft Systems (UAS) in airspace and at aerodrome. Seven Working Groups provide guidance material and recommendations to facilitate national aviation authorities to develop their own requirements and avoid unnecessary duplication of effort.
