

PRESS RELEASE No. 2019/33

May 2nd , 2019

JARUS Recommendations for UAS Category B Operations now available!

JARUS is pleased to announce to the RPAS Community that the deliverable **“JARUS Recommendations for Unmanned Aircraft Systems (UAS) Category B Operations”** is now available on the JARUS Website at <http://jarus-rpas.org/publications>

The new JARUS deliverable complements the “JARUS OPS Cat A” which was published in July 2018.

JARUS OPS Category B provides recommendations for States to voluntarily harmonise their own national legislation with regards to UAS operations.

The new JARUS deliverable contains recommended requirements to perform UAS operations in Category B (medium risk), which requires an operational risk assessment before conducting the operation.

Following a risk-based approach, the UAS operator must declare compliance with a standard scenario, request and receive authorization from the competent authority for one or a series of operations, or hold a Remote Operator Certificate (ROC).

In addition, JARUS-OPS Category B proposes technical requirements and administrative procedures for the implementation of the relevant concepts of registration, electronic identification and geo-awareness.

Following the JARUS Internal and External consultation process, Working Group 2 (Operations) experts from several JARUS Member States have consolidated the content of the **“JARUS Recommendations for UAS Category B Operations”**.

Feel free to forward this message to anyone interested in the new JARUS deliverables.

Note to editors

JARUS is a group of experts from 59 National Aviation Authorities (NAAs) and regional aviation safety organizations, as well as EASA and EUROCONTROL.

JARUS aims to recommend a single set of technical, safety and operational requirements for the certification and the safe integration of Unmanned Aircraft Systems (UAS) in airspace and at aerodrome. Seven Working Groups provide guidance material and recommendations to facilitate national aviation authorities to develop their own requirements and avoid unnecessary duplication of effort.
